Project Name	**Script-Controlled ACL – Restrict Record Access Based on Field Value**
Maximum Marks	3 Marks

DFD (Data Flow Diagram) – Description

The **Data Flow Diagram (DFD)** illustrates how user requests and record information flow through the ServiceNow ACL security system. The **Administrator** configures users, roles, the Institution Details table, records, and Access Control Lists. When the **Project User** requests access to a record, ServiceNow checks the assigned role and evaluates the configured ACL rules, including the Branch-based script condition. The system then either **authorizes the request** and displays the permitted record, such as the EEE record, or **denies the request** when the access condition is not satisfied. This process ensures that Institution Details records are protected according to the defined security rules.
